

Cleanroom T-Bar and Lights

Our T-Grid Ceiling Systems Enhance Cleanroom Security

Clean Rooms International advances cleanroom standards with its ceiling system components. Our state-of-the-art systems help tight-tolerance temperature and humidity-controlled environments conform with the latest government and industry standards. After ceiling blanks, light fixtures, and filters are installed in the grid, a secure, airtight barrier is formed against dust and moisture for sensitive cleanroom needs.

For more information about our Ceiling Systems and other cleanroom products and services, consult with a Clean Rooms International factory representative.

T-Grid Systems are in stock, ready for immediate delivery. Our 2" Heavy Duty, Walkable and Gel Seal Style suspension hardware is interchangeable, providing easy adjustment for installing the ceiling dead level.

Cleanroom Light Fixtures are sealed fixtures made especially for cleanrooms. Our lights allow re-lamping and ballast removal from roomside without contaminating clean areas.

Teardrop Lights have a narrow airfoil design to minimize turbulence in cleanrooms requiring a uni-directional air flow, and can be easily mounted on 2" T-Bar.

Flow-Thru Light Troffers accept a SAM® Filter Unit on the top and allow HEPA or ULPA filtered air to flow through the fixture and into the cleanroom.

Cleanguard Cleanroom Ceiling Panels feature factory-sealed edges and a white vinyl face.

2" Gasket Seal

2" Gasket Seal (Slotted)

2" Walkable T-Grid

1.5" Gasket Seal

2" Gel Seal

Most of the above items are in stock and available for quick delivery.
